

Frontiers of Environmental Science & Engineering

Aims & Scope

Frontiers of Environmental Science & Engineering (FESE) is an international journal for researchers interested in a wide range of environmental disciplines. The journal's aim is to advance and disseminate knowledge in all main branches of environmental science & engineering. The journal emphasizes papers in developing fields, as well as papers showing the interaction between environmental disciplines and other

disciplines.

FESE is a bi-monthly journal. Its peer-reviewed contents consist of a broad blend of reviews, research papers, policy analyses, short communications, and opinions. Nonscheduled "special issue" and "hot topic", including a review article followed by a couple of related research articles, are organized to publish novel contributions and breaking results on all aspects of environmental field.

Supervised by

Ministry of Education of the People's Republic of China

Sponsored by

Chinese Academy of Engineering

Administered by

Higher Education Press, China
Tsinghua University, China

Submission information

Manuscripts should be submitted to

REVIEW

- 16** Novel perspective for urban water resource management: 5R generation

Lijie Zhou, Hongwu Wang, Zhiqiang Zhang, Jian Zhang, Hongbin Chen, Xuejun Bi, Xiaohu Dai, Siqing Xia, Lisa Alvarez-Cohen, Bruce E. Rittmann

- 17** A review on anammox process for the treatment of antibiotic-containing wastewater: Linking effects with corresponding mechanisms

Jinjin Fu, Quan Zhang, Baocheng Huang, Niansi Fan, Rencun Jin

RESEARCH ARTICLE

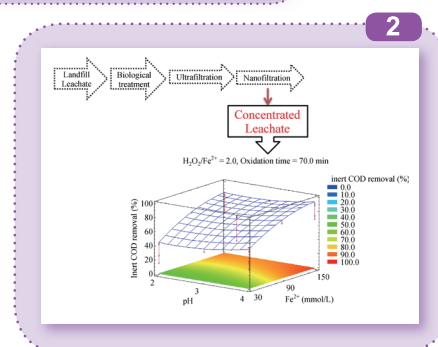

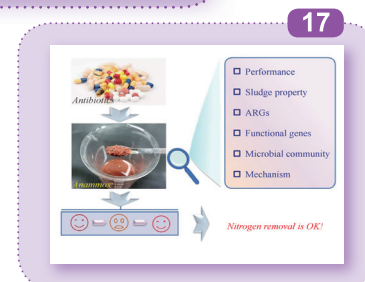

- 1** Evaluation of the technoeconomic feasibility of electrochemical hydrogen peroxide production for decentralized water treatment

Yang Li, Yixin Zhang, Guangshen Xia, Juhong Zhan, Gang Yu, Yujue Wang

- 2** Degradation of refractory organics in concentrated leachate by the Fenton process: Central composite design for process optimization

Senem Yazici Guvenc, Gamze Varank

- 3** A "Seawater-in-Sludge" approach for capacitive biochar production via the alkaline and alkaline earth metals activation
- Xiling Li, Tianwei Hao, Yuxin Tang, Guanghao Chen**

- 4 Real drive cycles analysis by ordered power methodology applied to fuel consumption, CO₂, NO_x and PM emissions estimation

**Pol Masclans Abelló, Vicente Medina Iglesias,
M. Antonia de los Santos López,
Jesús Álvarez-Flórez**

- 5 Evolution of humic substances in polymerization of polyphenol and amino acid based on non-destructive characterization

**Jianmei Zou, Jianzhi Huang, Huichun Zhang,
Dongbei Yue**

- 6 Assessing combined toxic effects of tetracycline and P25 titanium dioxide nanoparticles using *Allium cepa* bioassay

**Barsha Roy, Khushboo Kadam,
Suresh Palamadai Krishnan,
Chandrasekaran Natarajan, Amitava Mukherjee**

- 7 Effects of Fe(II) on anammox community activity and physiologic response

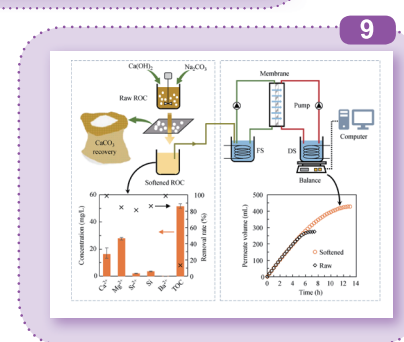

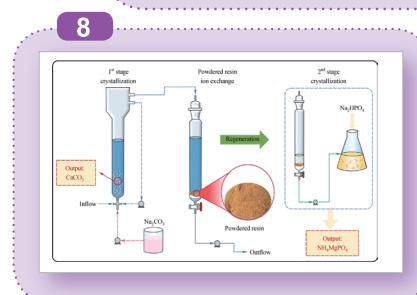

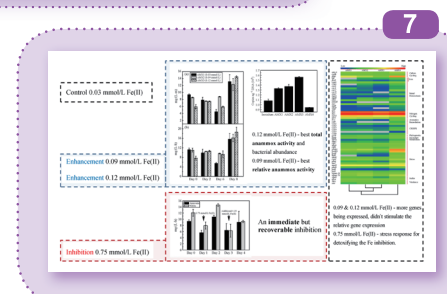

**Jing Ding, Wanyi Seow, Jizhong Zhou,
Raymond Jianxiong Zeng, Jun Gu, Yan Zhou**

- 8 Ammonia removal from low-strength municipal wastewater by powdered resin combined with simultaneous recovery as struvite

**Kuo Fang, Fei Peng, Hui Gong,
Huanzhen Zhang, Kaijun Wang**

- 9 Forward osmosis coupled with lime-soda ash softening for volume minimization of reverse osmosis concentrate and CaCO₃ recovery: A case study on the coal chemical industry

Jiandong Lu, Shijie You, Xiuheng Wang

- 10 Assessment of future climate change impacts on water-heat-salt migration in unsaturated frozen soil using CoupModel

Hanli Wan, Jianmin Bian, Han Zhang, Yihan Li

- 11 Electro-assisted CNTs/ceramic flat sheet ultrafiltration membrane for enhanced antifouling and separation performance

Shuo Wei, Lei Du, Shuo Chen, Hongtao Yu, Xie Quan

- 12 Acceleration of the particulate organic matter hydrolysis by start-up stage recovery and its original microbial mechanism

Yanqing Duan, Aijuan Zhou, Xiuping Yue, Zhichun Zhang, Yanjuan Gao, Yanhong Luo, Xiao Zhang

- 13 Characterization of value-added chemicals derived from the thermal hydrolysis and wet oxidation of sewage sludge

Milan Malhotra, Anurag Garg

- 14 Effects of ambient temperature on regulated gaseous and particulate emissions from gasoline-, E10- and M15-fueled vehicles

Rencheng Zhu, Jingnan Hu, Liqiang He, Lei Zu, Xiaofeng Bao, Yitu Lai, Sheng Su

- 15 Mercury removal from aqueous solution using petal-like MoS_2 nanosheets

Ragini Pirarath, Palani Shivashanmugam, Asad Syed, Abdallah M. Elgorban, Sambandam Anandan, Muthupandian Ashokkumar

It is my great honor to succeed Prof. Jiming Hao as editor-in-chief for the journal “Frontiers of Environmental Science and Engineering” (FESE). I sincerely pay my tribute to Prof. Hao for his outstanding contribution to FESE. Without his wisdom and leadership, FESE could not have made such admirable and impressive achievements. I am aware of the arduousness and challenge of this position. Only by relying on all editorial board members, editorial colleagues, authors, and peer reviewers can we take FESE to the next level.

Driven by the demand of solving problems and the development of science and technology, environmental science and engineering has become an extremely important and irreplaceable subject field in today’s world. Under such background, FESE has published a large number of outstanding fundamental and applied research achievements under multidimensional perspectives. These papers and achievements continuously reflect and expand the frontiers of environmental science and technology, and constantly enrich the contents and implications of environmental science. FESE has become a renowned international environmental academic journal with the integration of science and technology, high outlook, vitality, and increasing influence.

Globally, the environmental discipline is showing its functionality and charm with unprecedented creativity and inclusiveness. Currently, the perspective and structure of environmental science and technology are changing and expanding, with the outlook for ecological civilization, the goal of carbon neutrality, the protection of human health and safety, and the circulation of resources. Meanwhile, with the further exploration and understanding of the natural, ecological, and social processes, environmental science and technology is led into a more profound, but unknown field. Technological, industrial and cognitive revolutions will also endow environmental science and engineering with more complex missions and challenges; ; Our discipline is growing under such pressures and opportunities and FESE will prosper and progress together with these great changes.

The year of 2021 will certainly be a year full of changes and expectations. Hereby, I hope that the members of editorial board and editorial office will aim high and work hard to achieve the standards and guarantee the quality of FESE; I expect that the authors will support FESE by submitting more excellent manuscripts; And I appreciate that Chinese Academy of Engineering, Tsinghua University, and Higher Education Press will combine their efforts to support FESE and bring it forward towards a world-class academic journal.

Finally, I wish all friends who care about and support the journal a happy, healthy, and successful 2021.

Jiuhui Qu
